

Which Model is For You?

60 Inch Platform

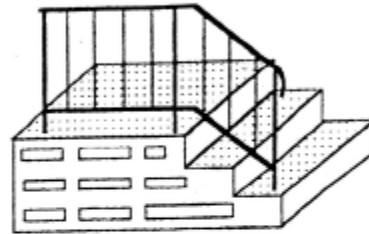

This model is used most often as a side-entry unit with an enclosed back wall. It is available in 3 & 4 foot widths.

It is also available in a 6 foot width to form our largest step and platform unit.

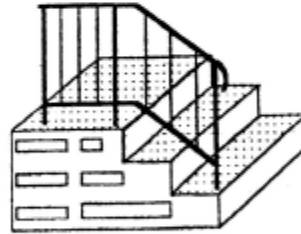

42 Inch Platform

This is our most popular model. It allows most doors to open out onto the deck without forcing the person off the top platform. It is available in all widths and as a side-entry unit in the 3 & 4 foot widths.

30 Inch Platform

The 30 inch deck can be used when space is limited in which to install the step unit. It is used most frequently when the door opens inward away from the step. In this case, there is sufficient room to stand while unlocking and opening the door.

Step Only — 13 Inch Top Step

This unit is used to add steps to an existing porch, deck, or loading dock.

It may also be combined with a side-entry unit to form a multi-directional exit.
